# AMACENA®

Database for managing serial data

Highlights

- **Integrated IT-Infrastructure** from coding line up to Partners/ Governments

- **Easy operation** due to transparent datastructures -> No experts required

- **Validated Software** -> Easy, quick and low-cost implementation

- **Cost effective** due to Cloud technologies

- Suited also for **medium and small MAH's and CMO's**

L5 Systems e.g. EMVO, CN, RUS,US

HICOF®

AMACENA Corporate

AMACENA Core

Other L4,L3 Systems & interfaces to customers

Production Site(s)

AMACODER

AMAJOINER

Serialization and Tamper evidence

Aggregation

System

Currently, a cascade of servers is required as IT-backbone for serialization, starting on line level, through site up to corporate level. Supplied by a multitude of suppliers, interfaces are needed between the different database levels creating data integrity issues as multiple redundant data entry is needed. The solution: Amacena is one single, integrated system replacing this complex landscape. The resulting benefits:

- **One single source of truth** for all data (e.g. a fully GxP compliant Master Data Management)

- **Integration of partners on global scale** without local server infrastructures posible

- **Interfaces** with partners (MAH – CMO) and governmental agencies (EMVO, NMVO) available

- **Centrally manages Artworks** for serial codes allows direct access to printers and cameras

Amacena uses state of the art Internet & Cloud technologies, **minimizing investments and running cost**.
